Subject: W Tank 13 pit 2  
Date: 01/10/2013 10:27 AM

Ga Y,

Attached to this e-mail is a photo that shows the state of affairs with the pit/trench that was used by Superio to collect the crude that was leaking from Tank 13. After the tank was emptied by Superio, and before the tank underwent cleaning, the pit/trench was pumped dry. By yesterday this photo shows that Superio has allowed the trench to remain in place. The trench was not filled and it should have been.

The tank has not leaked from the initial source at the base. Some of the increased volume of liquid could be due to water that has collected from the recent rains they had last week. I think Superio could have saved some expenses (crude, damages, and remediation costs that will be needed for the affected soils and groundwater).

Alonzo
